Driven to Discover®

# Overview

- Manure provides nutrients for cropping systems.
- Current published livestock manure “book values” (the approximate manure nutrient concentrations) used in the United States (U.S.) are several decades old.
- Recent data from several Midwest U.S. labs indicated manure nutrient data has changed compared to published Midwest Plan Service (MWPS) manure book values (2004).
- The University of Minnesota has grant funding to create a manure nutrient database called ManureDB to update these values.
- We are partnering with laboratories that analyze manure.

# What are manure book values used for?

- Developing manure management plans
- Designing manure storages
- Establishing best management practices for manure land application
- Modeling nutrient cycling and gas emissions

# Preliminary Lab Data

- Three Midwestern laboratories
  - Over 80,000 samples!
- Samples from 2012-2021
- Sorted between liquid and solid
- Divided into four main livestock groups
  - Beef
  - Dairy
  - Poultry
  - Swine

# Comparing MWPS to 3 Labs - Swine Liquid Manure

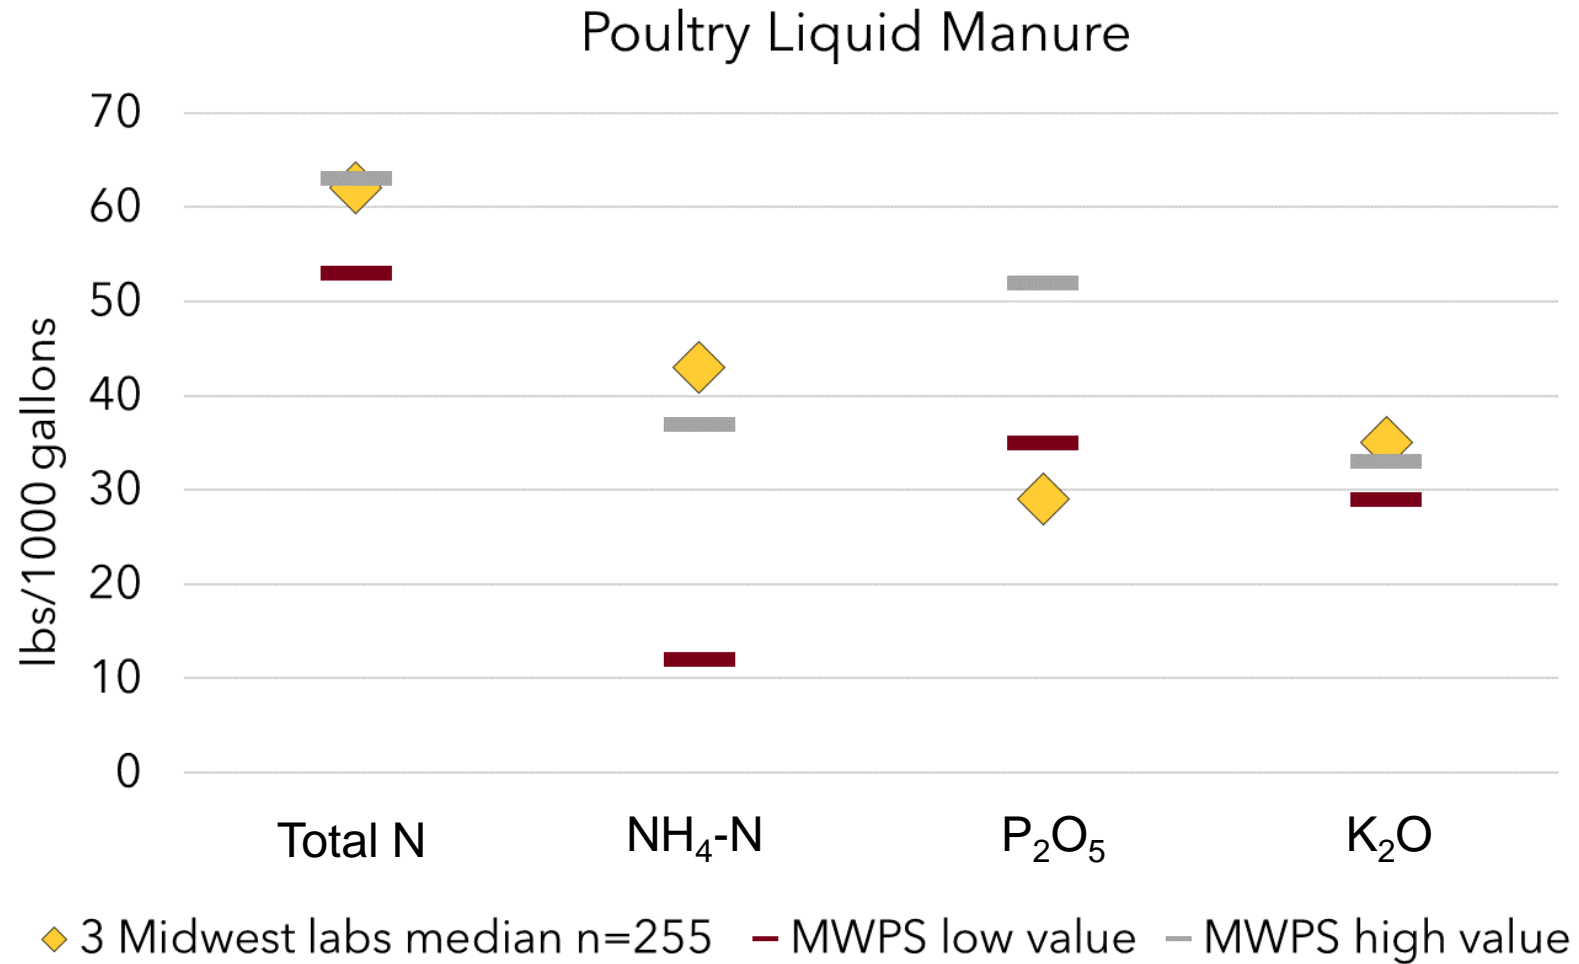

# Comparing MWPS to 3 Labs - Dairy Liquid Manure

# Comparing MWPS to 3 Labs - Beef Liquid Manure

# Comparing MWPS to 3 Labs - Poultry Liquid Manure

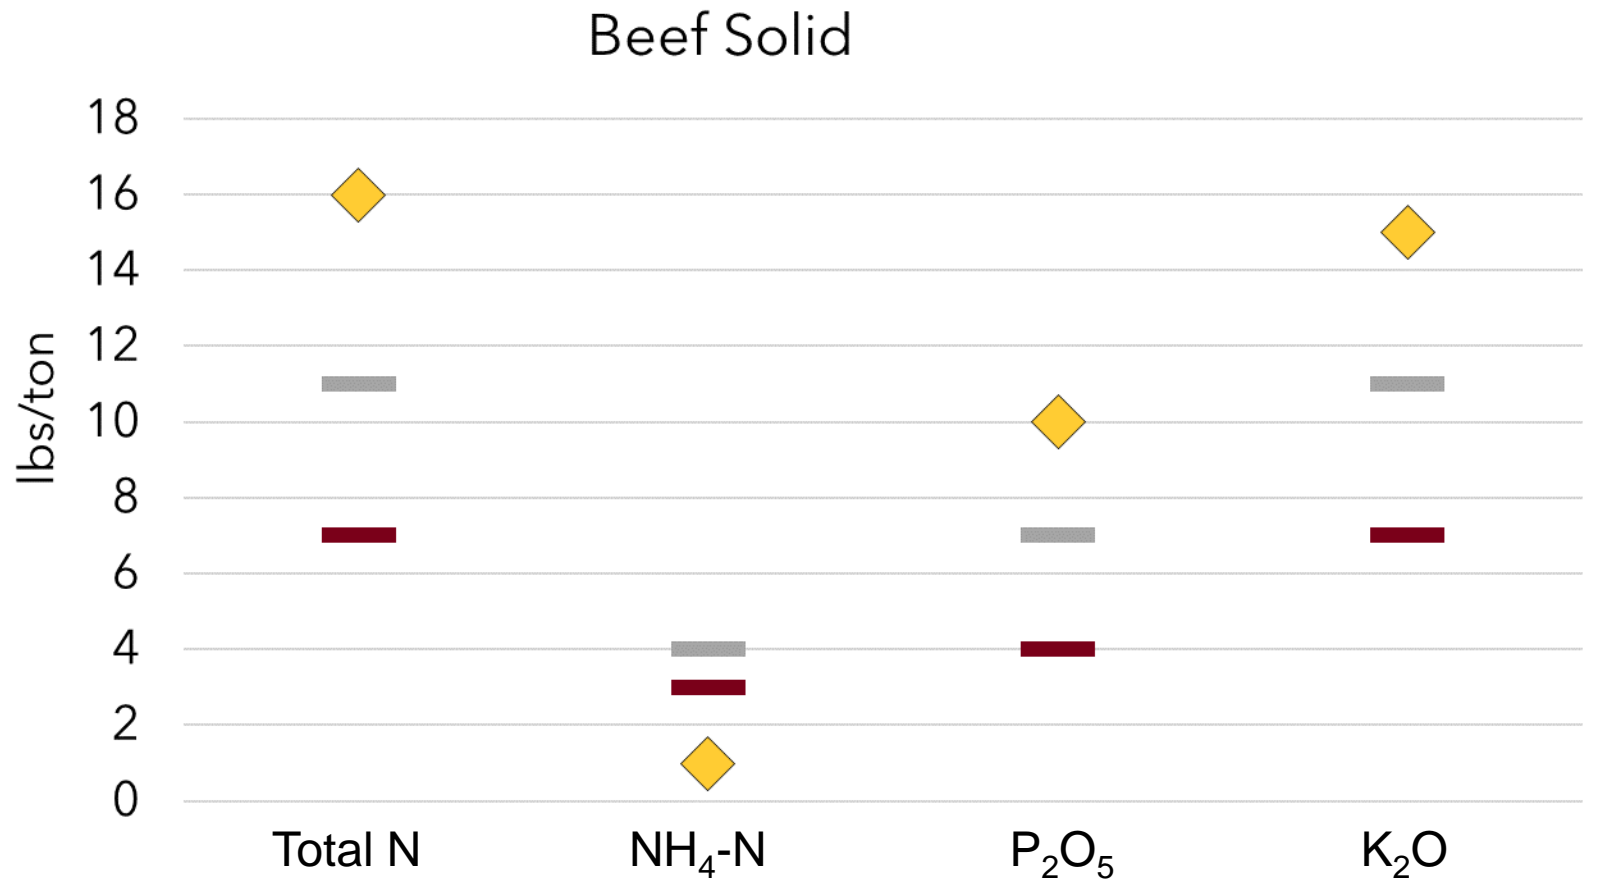

# Comparing MWPS to 3 Labs - Swine Solid Manure

# Comparing MWPS to 3 Labs - Dairy Solid Manure

# Comparing MWPS to 3 Labs - Beef Solid Manure

◆ 3 Midwest labs median n=5056 — MWPS low value — MWPS high value

# Comparing MWPS to 3 Labs - Poultry Solid Manure

# Summary

- Preliminary data from 3 labs showed changes in manure trends from published manure book values
- Detailed metadata will be key for future robust comparisons

# **ManureDB:** Nationwide Manure Test Database

- Minnesota Supercomputing Institute
- Stakeholder group

- Schema
- Database
- Website

- Laboratory cooperation
- Currently cleaning and uploading data
- Over 58,000 samples in the database with more getting processed for entry

ManureDB is an aggregating tool of manure laboratory analyses where data can be utilized in a standardized way.

Choose a Manure Type

- Beef
- Dairy
- Swine
- Poultry
- Horse

Beef	Beef	5987
Biosolids	Biosolids	0
Bison	Bison	7
Cattle	Cattle	749
Dairy	Dairy - Calf	0
Dairy	Dairy - Calf and Heifer	0
Dairy	Dairy - Heifers	20
Dairy	Dairy - Lactating Cow	4
Dairy	Dairy - Dry Cow	4
Dairy	Dairy	9330
Deer	Deer	6
Fish	Fish	0
Horse	Horse	52
Llama	Llama	0

#### Year Analyzed

- 2022
- 2021
- 2020
- 2019
- 2018
- 2017
- 2016

#### State

- AL
- AR
- AZ
- CA
- CO
- FL

### Manure Type

- As-excreted (urine)
- As-excreted (feces)
- Litter
- Compost
- Truck Wash
- Paunch
- Unknown

If no Manure Type is selected, all will be searched, including those samples that do not have an assigned Manure Type.

### Storage Type

- Lagoon
- Uncovered Pit or Tank
- Covered Pit or Tank
- Earthen Basin
- Runoff Holding Pond
- Solid
- Underfloor Solid

# What we have learned with incoming data

- Most samples have minimal descriptions beyond animal species and little is known about storage types
  - Age, nutrition, housing, manure handling and storage all can affect these nutrient levels

# Future Plans

- Finish construction and user-testing of ManureDB beta site in collaboration with participating laboratories
- Publish ManureDB as a publicly available website
- Recruit more laboratories to participate in the database

# Stay in the loop!
